

NEW GILLIG HVAC CONTROL PANEL

The digital HVAC control panel in the new Gilligs is designed to give the operator more control over the Heat and A/C in the bus. Just follow the instructions below.

1. Turn on the system with this button. The system's HEAT – A/C and FANS will default to AUTO on start-up.
2. Leave the system's fans in AUTO.
3. Leave the HEAT – A/C selector in AUTO.
4. Increase / Decrease the temperature by pressing the appropriate UP/DOWN arrow.
5. Check the outside temperature by pressing the circle-of-arrows button.

NOTE: You may set the system manually, however, the AUTO feature will generally reach a comfortable temperature in most situations.
